

Multi-Site Enterprise Solution

Insight's Enterprise Solutions equip you with the power to collect, manage and analyze your information across multiple sites. With powerful data synchronization you can view the activity from any scale at any of your landfills or transfer stations as the trucks are crossing the scale. Dispatch and route at remote sites while billing from your headquarters. Divisional or consolidated billing and reporting give you the insight into how each of your operations are performing.

Integrate multiple sites

You can instantly synchronize all of a sites information with a central management site system. This means that any new customers or vehicles added at one site can be synchronized across all sites before the truck leaves the scale.

View comparative analysis between this year and last for any site or your entire organization.

Manage multiple landfills or transfer stations.

All of the tickets from the remote sites are instantly synchronized with all other sites. A customer's credit exposure is known and calculated up to the minute. Scale house personnel have an accurate and timely status of a customer's account when the customer is at the window. Management knows everything up to the minute through the Business Inquiry's **State of the Business Window**.

Easy information exchange with your drivers and sales people on the road.

Sales representatives can synchronize their laptops daily or as needed. Drivers on their routes can synchronize the route and dispatch information automatically from the onboard computer.

Synchronize as often as you like.

Configurable synchronization frequency of all information edited at remote sites. Your connections between the sites can be anything from dial-up to a dedicated T1 line. You can synchronize instantaneously or once a day.

Advanced Automation

Hauling

Radio Frequency Vehicle and Container Tag. Increase throughput and customer satisfaction by completing your tickets faster. Information about the vehicle and customer are read in advance, creating the ticket even faster.

Unattended Ticketing. A simple touch screen interface allows authorized drivers to complete their own load ticket quickly and conveniently. Not yet Available.

Scale Entry and Exit Motion Sensors are used to facilitate ticket entry automation. Each step of the journey across the scale triggers data gathering for the vehicle, tare, gross and possibly the customer, origin and charges.

Onboard Routing and Dispatch Systems. Eliminate route sheets and printed dispatch tickets. Except for the customer receipt, all data is processed in the computer and synchronized with the office at days end. Tickets, inventory and routing data are uploaded to the host system and the drivers system is refreshed with the new assignments. Not yet Available

Transaction Image Capture. Eliminate disputed loads with undeniable image-based transaction verification.

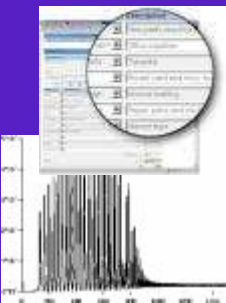

Dispatch Board Text Message Interface to Drivers. Send dispatches to your drivers directly from the dispatch board to their text messaging phone. Not yet Available.

Throughput Analysis. You can know how efficient each step of the information gathering is. Measure and adjust each step of the ticketing process. Analysis reports identify the slow areas so you can address them and improve performance.

Inventory Control Radio Frequency Vehicle and Container Tag Identification. Keep your inventory tracking precision up to the minute with Radio Frequency Tags on your containers. Your drivers just shoot the container; the inventory is updated, and the ticket or route tracking is completed automatically. Not yet Available.

Signature Pad. Permanently capture the driver signature. Reprint and view signed tickets.

Residential Payments. Bar coded return receipts and Electronic Funds Transfer help you expedite your cash collections. Not yet Available.
